SYSTEM AND METHOD FOR GLOBALLY ACCESSING COMPUTERSERVICESABSTRACT OF THE DISCLOSURE

5 A system for communicating through a computer network. The
system includes a communications engine for establishing a
communications link with a server, a browser, coupled to the
communications engine, for receiving applet information
corresponding to a service from the server, and an applet engine for
10 using the applet information to control user interface I/O of the
service. The communications engine may confirm user access
privileges before establishing a communications link between the
client and the server. The communications engine receives
configuration data, and configures client attributes using the
15 configuration data to provide a user-specific user interface to the
client. It will be appreciated that the system may be stored on a
floppy disk or hard drive.
